**Bernd Lutterbeck**

贝恩特 鲁特贝克 博士

柏林工业大学经济信息系 教授  
欧共体耶蒙特活动中心 常任教授

Professor of Business Informatics  
Permanent Lecturer,  
Jean Monnet Action, CEC

Berlin University of Technology/Germany

# Coming soon: Pervasive Computing

Yet another hype?

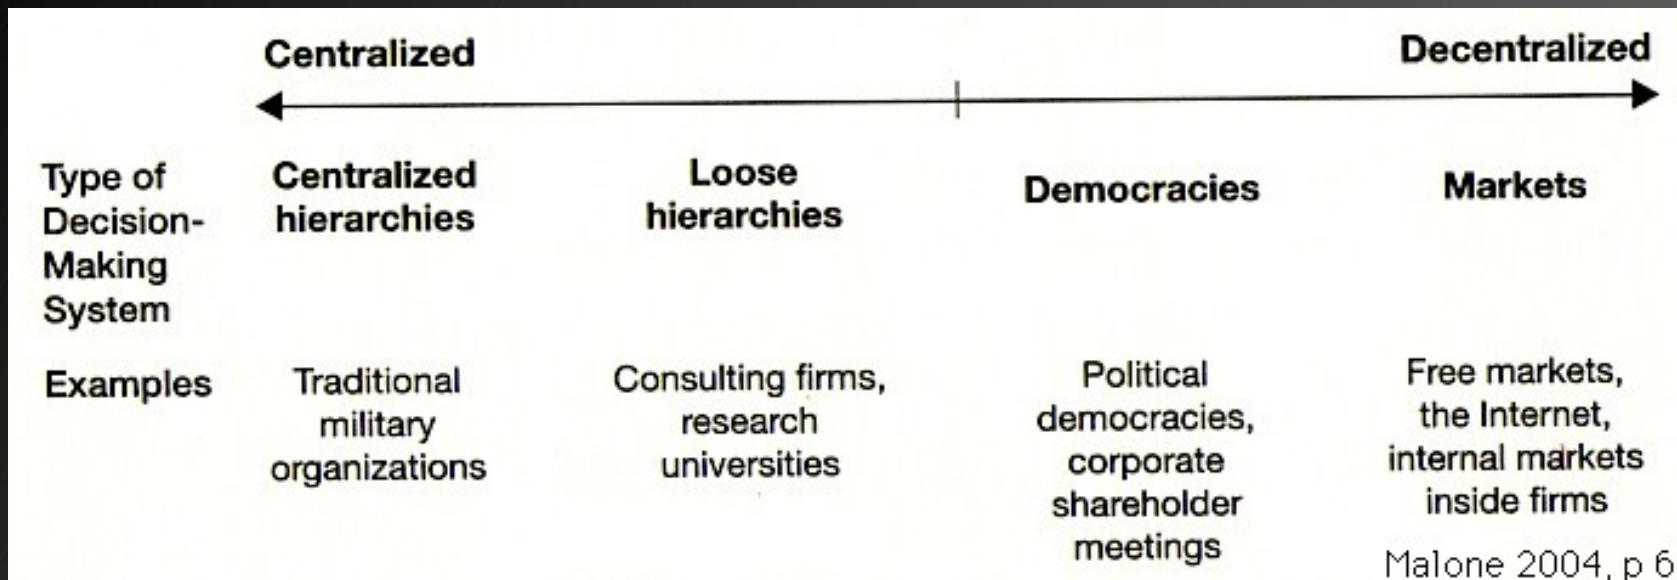

Global Ministerial Summit on International Cooperation in Software  
& Information Service and Entrepreneurs' High Level Forum

Dalian, June 22<sup>th</sup>, 2005

# Information society: the portfolio

- Communication infrastructure
  - content
  - services
- Telecommunication networks
- Broadband Internet access
- «3G» mobile communications
  - Internet telephony
- Digital material (eg cinema releases)

# The Decentralization Continuum

# Organizational patterns through history

*The major ways human societies have been organized throughout history reveal a remarkably simple pattern that foreshadows how businesses are now changing.*

## Human societies

## Business Organizations

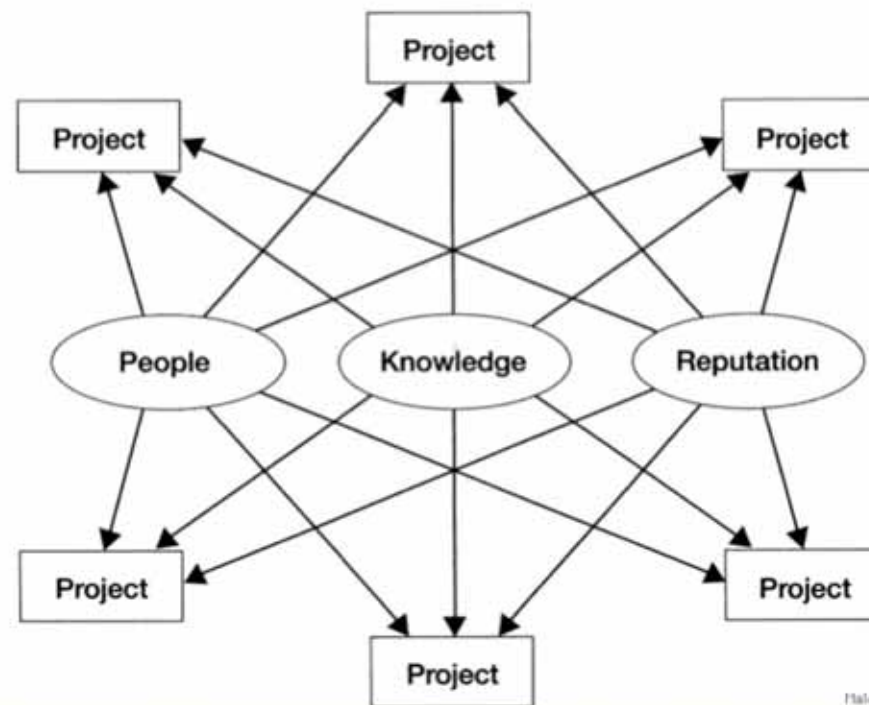

*The major changes in how businesses were organized throughout history echo the changes in how societies were organized.*

# That's what decentralization is about: Sharing people, sharing knowledge, sharing reputation

## One View of the Deep Structure of a Consulting Firm

*The lines between projects represent three types of dependencies: sharing people, sharing knowledge, and sharing reputation.*

H Malone 2004, S. 143

# User Innovation Networks

User – firms and individuals – centered  
innovation

versus

Manufacturer-centric innovation development

The advantages of user centered innovation are  
eminent.

The best example is software

<b>Industrial products</b>	<b>Type of users</b>	<b>Percentage building products for their own use</b>
CAD software	136 user attendies	24 %
Piper hanger hardware	employees in 102 firms	36 %
Library information systems	employees in 102 Austriian libraries	26 %
Surgical equipment	261 surgeons in university clinics in Germany	22 %
Apache OS server software	131 Apache users (webmasters)	19,1 %
<b>Consumer products</b>		
Outdoor consumer products	153 recipients of mail order catalogs	9,8 %
«Extreme» sporting equipment	194 members of 4 sporting clubs	37,8 %
Mountain biking equipment	291 mountain bikers in one region	19,2 %

# Transaction costs for communication - about zero

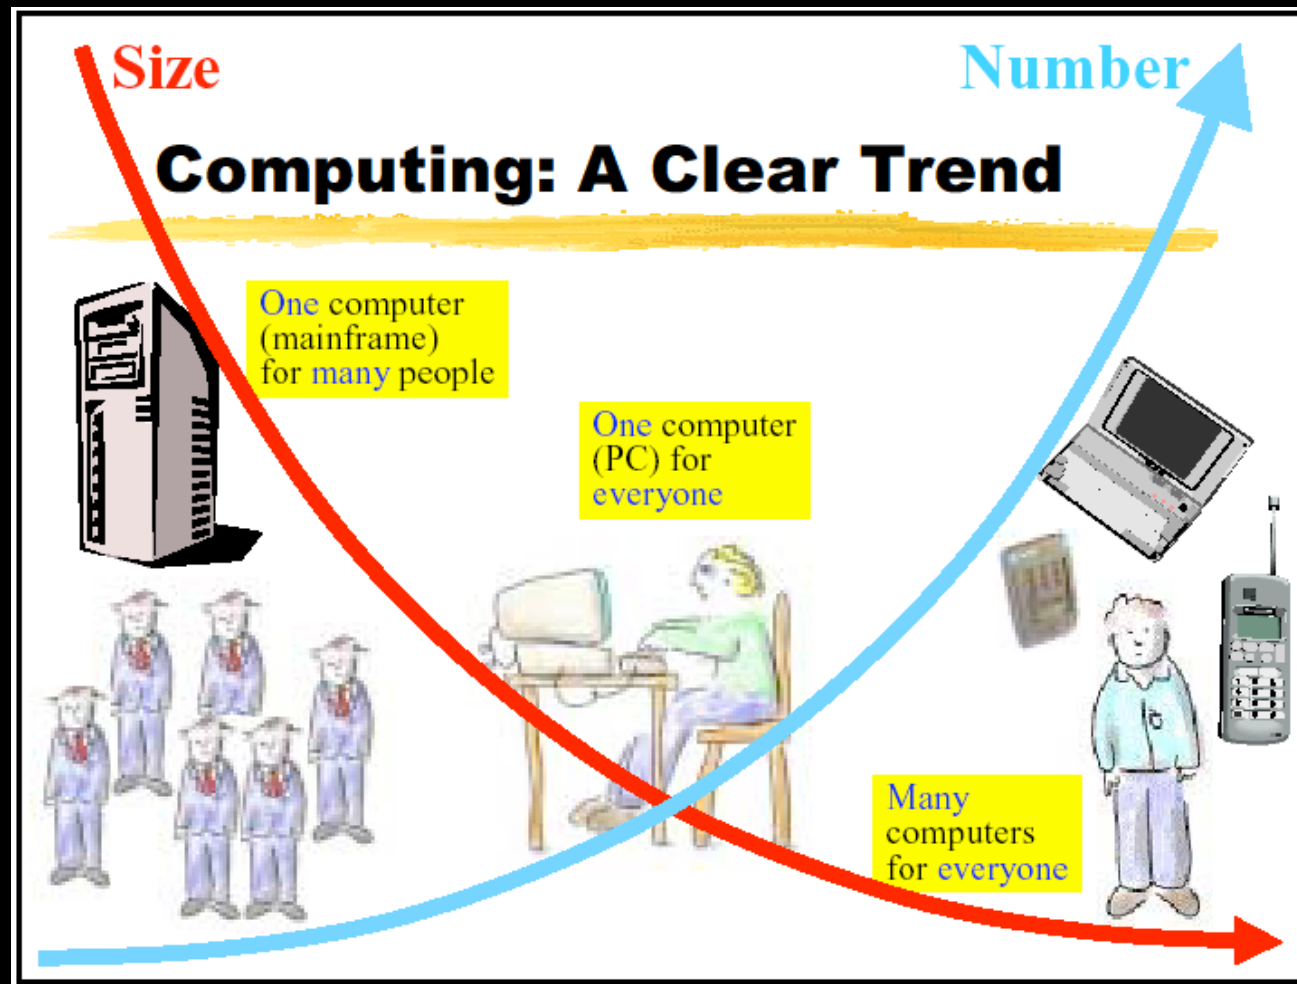

## Delay and Cost for Transmitting One Page of Text via Different Media

Medium	DELAY IN HOURS		COST	
	1 Destination	100 Destinations	1 Destination	100 Destinations
Pre-railroad Mail, 1840s	252.000	260.3	\$0.25	\$107.17
Railroad, 1850s	48.000	56.3	\$0.03	\$85.17
Telegraph, 1850s	0.083	8.3	\$7.50	\$750.00
E-mail, 2000s	~0	~0	~0	~0

That's what makes  
Open Source Software  
a success: Sharing  
people, sharing  
knowledge, sharing  
reputation

# What is Pervasive Computing\*

The following slides courtesy of F. Mattern/ETH Zuerich (CH)

# The Trend... What's Next?

# The Vision

*„In the 21st century the technology revolution will move into the everyday, the small and the invisible...”*

Mark Weiser (1952 – 1999), XEROX PARC

- Small, lightweight, cheap, mobile **processors** and sensors
  - in almost all **everyday objects** („**embedded computing**“)
  - on your **body** („**wearable computing**“)
  - embedded in the **environment** („**sensor networks**“)

### 3. Better Sensors

- Miniaturized cameras, microphones,...
- Fingerprint sensor
- Radio sensors
  - without power supply
- Location sensors
  - e.g., GPS
- ...

POSITION  
N 047°  
23'17"  
E 008°  
34'26"

RFID tags

Toshiba (2004) 4 GB  
0,85 inch harddisk

Fingerprint  
sensor

## 2. Progress in Communication Technologies

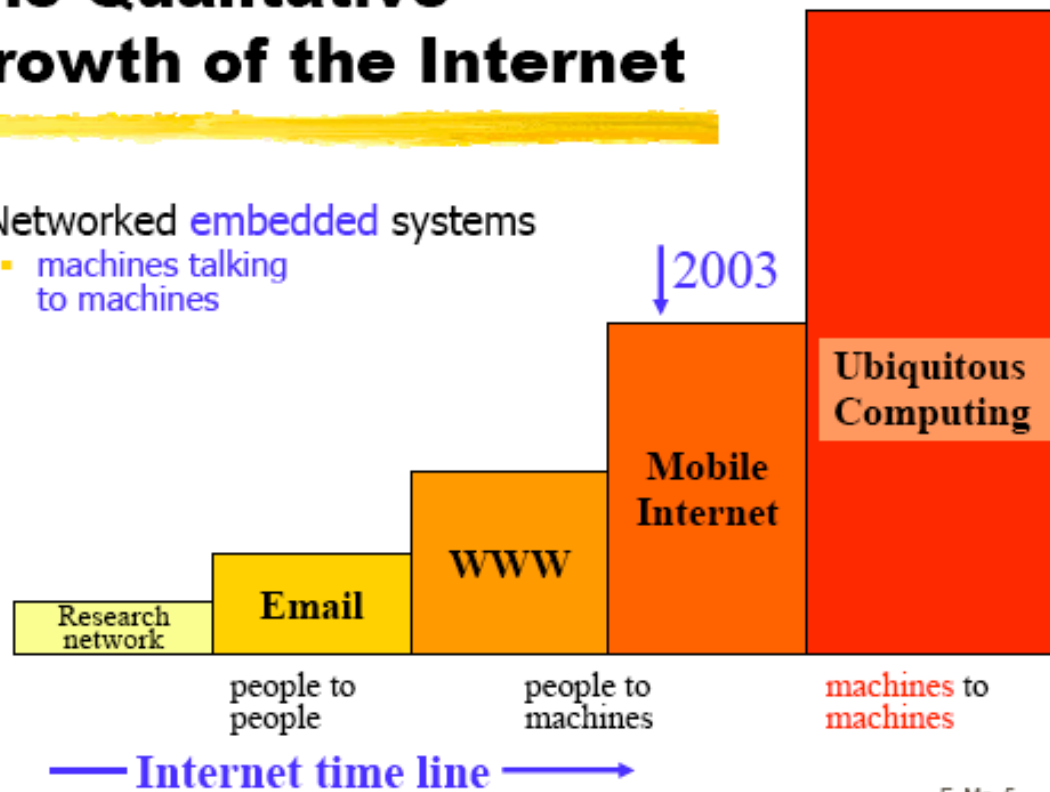

Nostalgia

- **Fiber optics:** from Gbit/s to Tbit/s
- **Wireless**
  - mobile phone: GSM, UMTS
  - wireless LAN (> 10 Mbit/s)
  - Bluetooth
- **Body** area networks

## The Qualitative Growth of the Internet

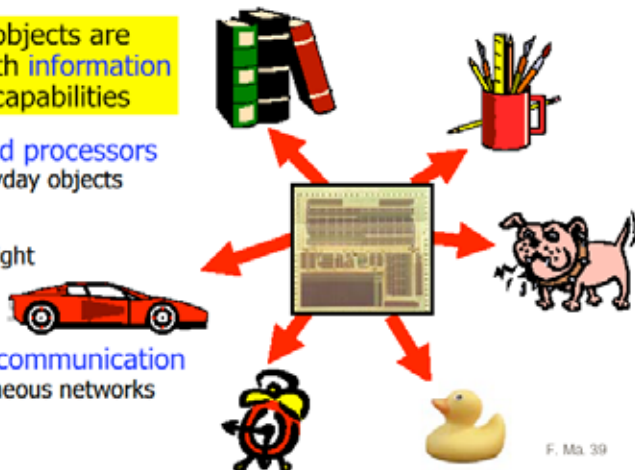

- Networked **embedded** systems
  - machines talking to machines

## Embedded Computing Enables „Cooperating Smart Things“

Real world objects are enriched with information processing capabilities

- Embedded processors
  - in everyday objects
  - small
  - cheap
  - lightweight
- Wireless communication
  - spontaneous networks
- Sensors

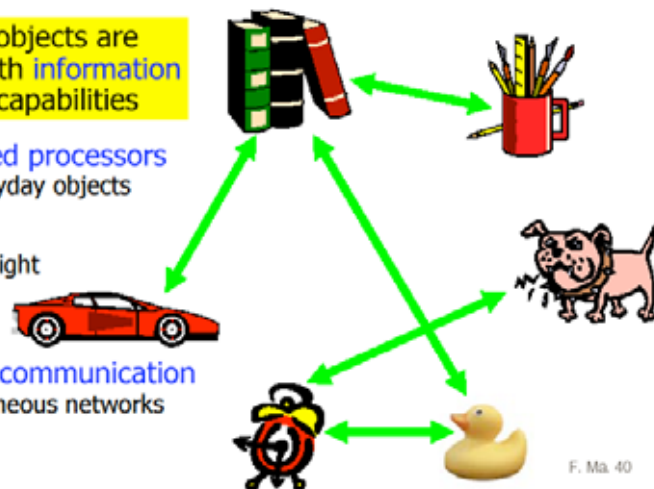

F. Ma. 39

## Embedded Computing Enables „Cooperating Smart Things“

Real world objects are enriched with information processing capabilities

- Embedded processors
  - in everyday objects
  - small
  - cheap
  - lightweight
- Wireless communication
  - spontaneous networks
- Sensors

F. Ma. 40

## Today's Prototype: A Retina Eyeglass Display

European banknotes:  
RFID against crime

# Shopping for daily life: Future Store/Germany

Fresh chese, champoo, razor blades  
All articles tagged with RFID

# All Trends Together Lead to a New Era

- Progress in
  - computing speed
  - communication bandwidth
  - material sciences
  - sensor techniques
  - computer science concepts
  - miniaturization
  - energy usage
  - battery technique
  - display technologies
  - price
  - ...

→ Ubiquitous Computing

Image source: "Die Zeit"

# Ubiquitous Computing

- Information technology will be **everywhere**

- Everyday objects will become **smart**
  - embedded processors
- ...and they will all be **interconnected**
  - wireless communication

F. Ma. 6

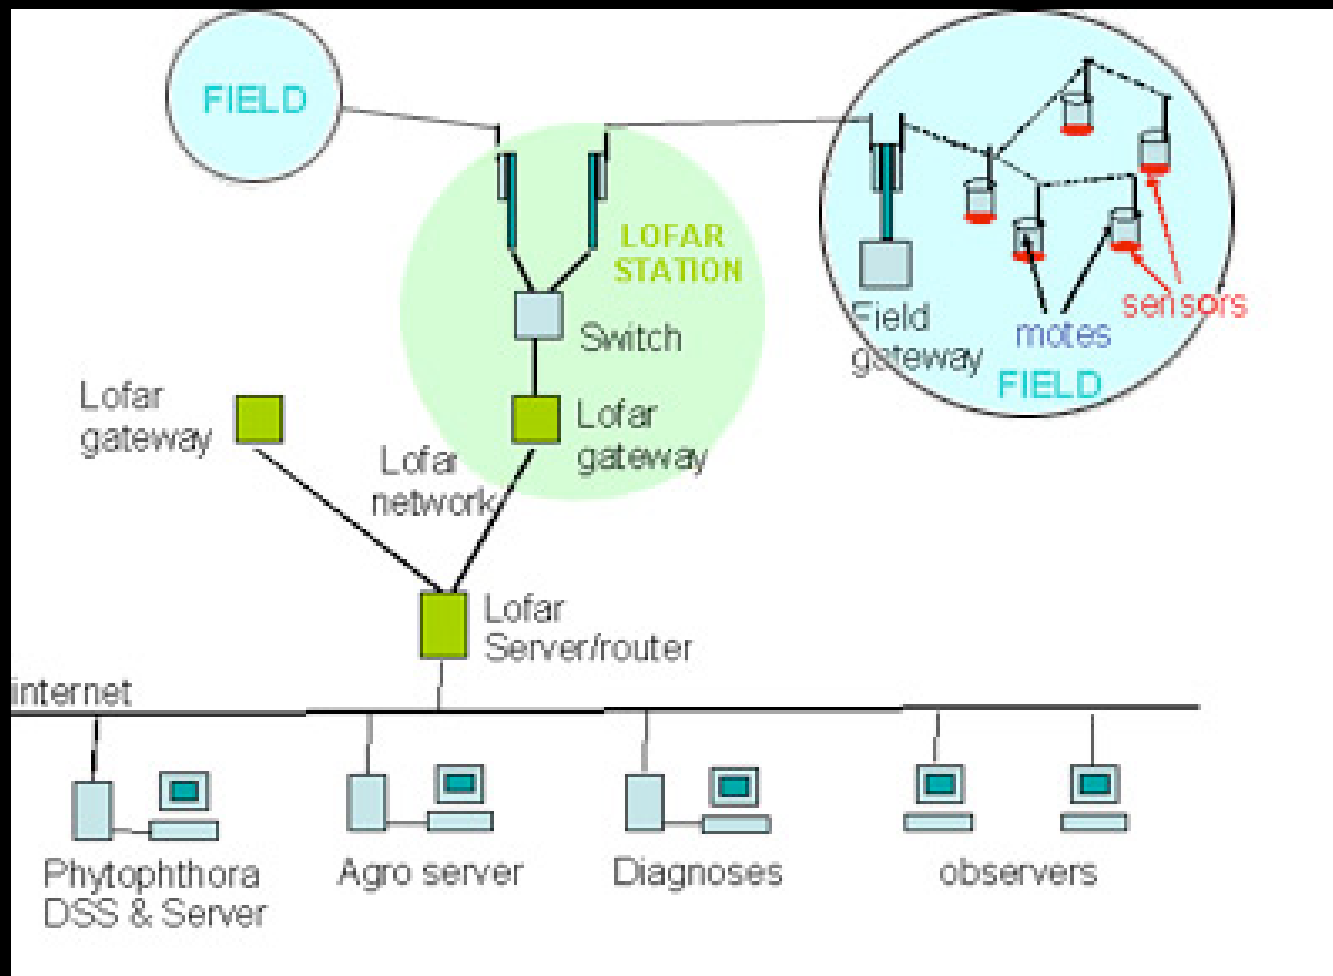

# The «real» vineyard\*

Sensor

\* British Columbia/CDN

# The «calm» vineyard

# Workflow of the vineyard

# Prada Store/New York

Opening 2001

Architect: Rem Koolhaas/NL

All articles with RFID-tags

Integration with consumer  
cards

More content linked with ID's

**«Prada uses  
architecture in  
conjunction with  
digital technology,  
to create urban  
identity and  
branding»**

# Prada Store Tokyo in Omote Sando Street

- Opening in 2003
- Architects:  
Herzog & De Meuron/  
Switzerland

Prada is  
architecture  
plus  
(IT-)technology

But Prada is more  
– an arrangement of  
public sphere in the  
21<sup>th</sup> century

# Shopping mall in Bloomington/Minnesota

Largest Mall in US  
4.2 Million square foot  
37,5 Million visitors in 1998

# The vision has become real

*«The most profound technologies are those that disappear. They weave themselves into the fabric of everyday life until they are indistinguishable from it.»*

*Marc Weiser, 1990*

# Conclusion

*You Remember the lesson from the  
previous chapters*

*Cooperation*

*Decentralisation*

*Ubiquitous Computing?*

**From technology emerges  
the freedom to create an  
endless variety of new  
environments**

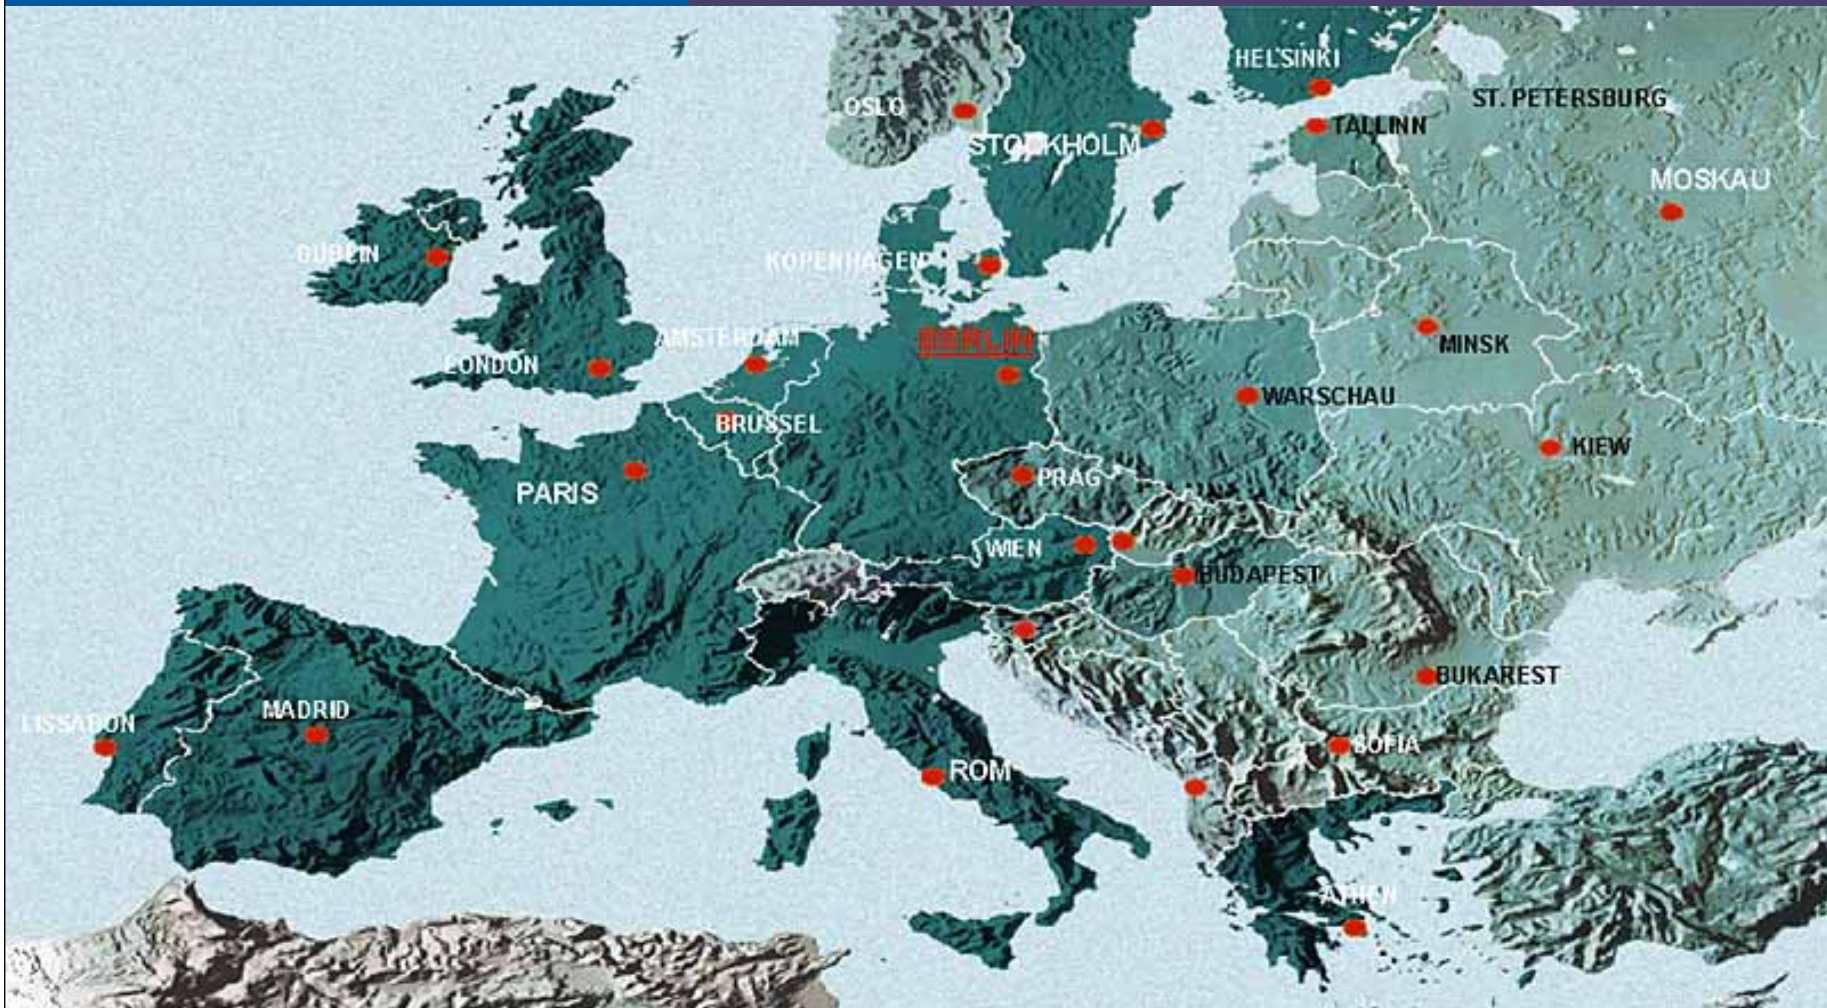

**Cooperation and  
Decentralization  
are among the  
best devices**

# Berlin in the center of Europe

Berlin

Wirtschaftsförderung Berlin  
INTERNATIONAL  
Berlin Business Development Corporation

## Berlin. One of Europe's largest research center

### Fields of specialization

- Information and Communications technologies
- Microsystems technology and optics
- Traffic engineering
- Transportation engineering
- Medical technology
- Biotechnology
- Media engineering

## Berlin. One of Europe's largest research center

BERLIN. THE RIGHT CONNECTION.

### Science and research parks and institutes (examples)

- Adlershof Technology Park (one of the 10 largest technology parks worldwide)
- Biomedical Campus
- Germany's Largest Fraunhofer centre
- DLR (The German Aerospace Center)
- FIRST (Research Institute for Computer Architecture and Software Technology)
- HMI (Hahn-Meitner-Institut, Department Silicon Photovoltaics)
- BAM (Federal Institute for Materials Research and Testing)
- [Department of Computer Science/Berlin University of Technology](#)

# My Advise

We shall start up with  
common projects of Dalian  
and Berlin researchers  
Capital, and firms will follow
